

What is claimed is:

1. An audio signal switching mechanism, comprising at least an audio signal changing-over unit for selecting a signal input from an external signal source; a micro-processing unit electrically connected to said audio signal changing-over unit for processing an input signal selected by the latter; a double-tone multi-frequency receiving unit electrically connected to said micro-processing unit for detecting and decoding any signal input from an external signal source, and sending the decoded input signal to said micro-processing unit; and an audio signal multiplex processing unit electrically connected to said micro-processing unit and said audio signal changing-over unit for selecting or switching a signal passing through said audio signal changing-over unit or input via an external signal source.
2. The audio signal switching mechanism as claimed in claim 1, wherein said audio signal changing-over unit, said micro-processing unit, said double-tone multi-frequency receiving unit, said audio signal multiplex processing unit are electrically

connected to a power supply unit.

3. The audio signal switching mechanism as claimed in
claim 2, wherein said power supply unit has a power
5 supply socket electrically connected thereto.

4. The audio signal switching mechanism as claimed in
claim 1, wherein said audio signal changing-over unit
has a microphone socket electrically connected
10 thereto.

5. The audio signal switching mechanism as claimed in
claim 1, wherein said audio signal changing-over unit
has an audio signal source socket electrically
15 connected thereto.

6. The audio signal switching mechanism as claimed in
claim 1, wherein said double-tone multi-frequency
receiving unit has a first communication socket
20 electrically connected thereto.

7. The audio signal switching mechanism as claimed in
claim 1, wherein said audio signal changing-over unit,
said micro-processing unit, said double-tone
25 multi-frequency receiving unit, and said audio

signal multiplex processing unit are integrated on one single chip.

8. The audio signal switching mechanism as claimed in
5 claim 2, wherein said audio signal changing-over unit, said micro-processing unit, said double-tone multi-frequency receiving unit, and said audio signal multiplex processing unit are integrated on one single chip.

10

9. The audio signal switching mechanism as claimed in claim 6, wherein said first communication socket has a communication carrier electrically connected thereto.

15

10. The audio signal switching mechanism as claimed in claim 9, wherein said communication carrier comprises a fax machine.

20 11. The audio signal switching mechanism as claimed in claim 9, wherein said communication carrier comprises a telephone.

12. The audio signal switching mechanism as claimed in
25 claim 11, wherein said telephone comprises a wired

telephone.

13. The audio signal switching mechanism as claimed in
claim 11, wherein said telephone comprises a wireless
5 telephone.

14. The audio signal switching mechanism as claimed in
claim 1, wherein said audio signal multiplex
processing unit has a second communication socket
10 electrically connected thereto.

15. The audio signal switching mechanism as claimed in
claim 14, wherein said second communication socket
has a signal line electrically connected thereto.
15

16. The audio signal switching mechanism as claimed in
claim 15, wherein said signal line comprises a
telephone line.

20 17. The audio signal switching mechanism as claimed in
claim 4, wherein said microphone socket has a
microphone electrically connected thereto.

18. The audio signal switching mechanism as claimed in
25 claim 5, wherein said audio signal source socket has

a signal-generating apparatus electrically
connected thereto.

19. The audio signal switching mechanism as claimed in
5 claim 18, wherein said signal-generating apparatus
comprises a computer.

20. The audio signal switching mechanism as claimed in
claim 18, wherein said signal-generating apparatus
10 comprises a stereo system.

21. The audio signal switching mechanism as claimed in
claim 18, wherein said signal-generating apparatus
comprises a television set.

15
